description and use

Memtrex PM Capsule Filters (CMPM) have a broad chemical compatibility. Constructed with high purity polypropylene membranes, hardware, and supports, they are ideal for the filtration of aggressive gases, liquids, and solutions from a wide variety of chemical, and engineering processes.

typical applications

Memtrex PM Capsule Filters are specifically designed for pure chemical filtration, including:

- Filtration of etchants, photoresists, and developers
- Filtration of solvents, acids, and bases
- Filtration of fine chemicals
- Vent/process air filtration

additional information

Memtrex PM Capsule filters may be sanitized with a variety of commonly used chemical agents. The capsules may be repeatedly autoclaved (250°F [121°C], 30 minutes) for up to 5 cycles.

SUEZ certifies that the materials contained in its Memtrex PM Capsule filters meet U.S. FDA requirements for food contact under the applicable regulations in 21 CFR. For further information, contact SUEZ. Memtrex PM filters meet the test criteria for USP class VI-121°C Plastics.

Figures 2, 3 and 4 show the test data results of flow performance for the small, medium, and large Memtrex FE Capsule Filters using a 10-inch length filter.

SUEZ filter capsules are designed and manufactured for resistance to a wide range of chemical solutions. Conditions will vary with each application and users should carefully verify chemical compatibility. Please contact your SUEZ distributor for more information.
